PHILIPS TECHNICAL REVIEW

VOLUME 19

1957/1958

C 91/1

PHILIPS TECHNICAL REVIEW

A publication of the Research Laboratories of N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Twelve issues per year and an average of 32 pages per issue. The Review is published in four editions: English, Dutch, French and German, all identical in contents.

Editors

S. Gradstein, Editor-in-chief
D. M. Duinker, Deputy editor
M. Beun
C. M. Hargreaves
J. W. Miltenburg

All rights reserved by N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Articles may be reproduced in whole or in part, provided that the editors are first notified and that the source "Philips Technical Review" is mentioned in full. Photographs and drawings for this purpose are available on request.

CONTENTS

VOLUME 19, 1957/1958

LIGHT

	Page
Electroluminescence and image intensification, by G. Diemer, H. A. Klasens and P. Zalm	1- 11
Applications of the interference of light in thin films, by P. M. van Alphen	59- 67
The function of additives in tungsten for filaments, by J. L. Meijering and G. D. Rieck	109-117
A luminous frame around the television screen, by J. J. Balder	156-158
An open-air laboratory for road lighting, by I. Hamming and J. F. T. van Heemskerck Veeckens	202-205
A mirror-condenser lamp for 8-mm projectors, by P. M. van Alphen and M. Bierman	233-235
The double-flux "TL" lamp, a fluorescent lamp of high output per unit length, by H. J. J. van Boort and D. Kolkman	333-337

TELECOMMUNICATIONS

	Page
The junction transistor as a network element at low frequencies, by J. P. Beijersbergen, M. Beun and J. te Winkel, II. Characteristics and *h* parameters	15- 27
II. Equivalent circuits and dependence of the *h* parameters on operating point	98-105
Pre-magnetization of the core of a pulse transformer by means of ferroxdure, by H. G. Bruijning and A. Rademakers	28- 37
Audio amplifiers with single-ended push-pull output, by J. Rodrigues de Miranda	41- 49
Applications of the interference of light in thin films, by P. M. van Alphen	59- 67
"Frena", a system of speech transmission at high noise levels, by F. de Jager and J. A. Greefkes	73- 83
Fundamentals of colour television, by F. W. de Vrijer	86- 97
A transmitting triode for frequencies up to 900 Mc/s, by P. J. Papenhuijzen	118-128
A 4000 Mc/s wide-band amplifier using a disc-seal triode, by J. P. M. Gieles	145-156
A luminous frame around the television screen, by J. J. Balder	156-158
Dispenser cathodes, I. Introduction, by A. Venema	177-179
II. The pressed cathode, by R. C. Hughes and P. P. Coppola	179-185
III. The impregnated cathode, by R. Levi	186-190
A radar sonde system for upper air measurements, by N. E. Goddard and H. A. Dell	258-263
A method of sealing the window and cone of television picture-tubes, by A. H. Edens	318-323
The projection of colour-television pictures, by T. Poorter and F. W. de Vrijer	338-355

SOUND

	Page
A transistor hearing aid, by P. Blom and P. Boxman	130-139
Electronic music, by H. Badings and J. W. de Bruyn	191-201
Fabrication of sapphire and diamond styli for gramophone pick-ups, by A. W. Ploegsma	324-326

X-RAYS AND NUCLEAR PHYSICS

	Page
Chladni's figures on the vibrating capacitor of a synchrocyclotron, by B. Bollée	84- 85
A simple apparatus for contact microradiography between 1.5 and 5 kV, by B. Combée and A. Recourt	221-233
Monitoring, control and safety equipment for a nuclear reactor of the swimming-pool type, I. General description, by M. van Tol	245-257
II. Further description of certain component units, by F. E. L. ten Haaf, G. Klein and F. J. Schijff	273-285
Dosimetry of the very weak X-radiation generated in television receivers and X-ray diffraction apparatus, by W. J. Oosterkamp, J. Proper and J. J. F. de Wijk	264-267
An X-ray diffraction tube with rotating anode for 10 kW continuous loading, by W. J. H. Beekman, A. Verhoeff and H. W. van der Voorn	314-317

MEASURING EQUIPMENT

Stroboscopic operation of photomultiplier tubes, by C. F. Hendee and W. B. Brown 50- 58

Low-voltage oscilloscope tubes, by F. de Boer and W. F. Nienhuis 159-164

Monitoring, control and safety equipment for a nuclear reactor of the swimming-pool type,
I. General description, by M. van Tol 245-257
II. Further description of certain component units, by F. E. L. ten Haaf, G. Klein and F. J. Schijff 273-285

A radar sonde system for upper air measurements, by N. E. Goddard and H. A. Dell 258-263

Dosimetry of the very weak X-radiation generated in television receivers and X-ray diffraction apparatus, by W. J. Oosterkamp, J. Proper and J. J. F. de Wijk 264-267

MATERIALS AND THEIR RESEARCH

The sub-microscopic structure of "Ticonal" G magnet steel, by H. B. Haanstra, J. J. de Jong and J. M. G. Smeets . . 11- 14

Pre-magnetization of the core of a pulse transformer by means of ferroxdure, by H. G. Bruijning and A. Rademakers 28- 37

The function of additives in tungsten for filaments, by J. L. Meijering and G. D. Rieck 109-117

Dispenser cathodes,
I. Introduction, by A. Venema . . . 177-179
II. The pressed cathode, by R. C. Hughes and P. P. Coppola . . . 179-185
III. The impregnated cathode, by R. Levi 186-190

Crystal-oriented ferroxplana, by A. L. Stuijts and H. P. J. Wijn 209-217

An improved method of cleating, by H. E. Deelman 268-269

Direct observation of Weiss domains by means of the Faraday effect, by C. Kooy 286-289

Barium getter films, by J. J. B. Fransen and H. J. R. Perdijk 290-300

Paramagnetic resonance, by J. S. van Wieringen 301-313

The generation of dislocations by thermal stresses, by P. Penning 357-364

MISCELLANEOUS

Electroluminescence and image intensification, by G. Diemer, H. A. Klasens and P. Zalm 1-11

A high-precision lathe headstock, by L. M. Leblans 68- 69

Chladni's figures on the vibrating capacitor of a synchrocyclotron, by B. Bollée. 84- 85

An application of television for the discovery of variable stars, by J. Borgman 140-142

The formulation of pesticides, by W. Duyfjes 165-176

Analysis of the gaseous contents of sealed cathode-ray tubes with the aid of the omegatron, by J. Peper 218-220

The Foucault pendulum in the United Nations Building in New York, by J. A. Haringx and H. van Suchtelen . . . 236-241

An improved method of cleating, by H. E. Deelman 268-269

Barium getter films, by J. J. B. Fransen and H. J. R. Perdijk 290-300

A method of sealing the window and cone of television picture-tubes, by A. H. Edens 318-323

Fabrication of sapphire and diamond styli for gramophone pick-ups, by A. W. Ploegsma 324-326
